BB007 The Ultimate Brake Bleeder Removal Tool Kit

A completely new and better way to remove brake bleeder screws.

New and improved one-piece, compact designed tool perfect for tight spaces.

The BB007 allows you to:

- Reduce labor time
- Avoid unnecessary and difficult drilling, tapping, or heating
- Decrease the risk of damaging the caliper
- Complete brake jobs faster and avoid delays

Advantages

- Everything you need in one easy-to-use tool kit
- Pays for itself in as little as one brake job
- Works with both aluminum and cast iron calipers
- Replacement bleeder screws included

How does the BB007 work?

Installing the pin into the bleeder screw prevents the walls from collapsing. Applying shock to the bleeder for approximately three to four seconds causes the bleeder to case-harden and loosens the threads. This makes the bleeder screw easy to remove without damaging the caliper.

It's as simple as

1, 2, 3!

- 1** — Insert special-sized pin into the bleeder screw
- 2** — Install removal tool into air chisel and shock bleeder from top
- 3** — Remove bleeder screw
