Subject: S.U.R.&R. Introduces New Fuel Injection Cleaner Adapter Kit

Owners of fuel injection cleaning systems can increase their number of serviceable vehicle applications, provide more thorough cleaning services, and save money with the new FIC440 Fuel Injection Cleaner Adapter Kit available from S.U.R.&R.

Designed to fit most fuel injection cleaning systems, this convenient, fourteen-piece kit includes nine connection lines and two male quick chuck adapters which make it simple to connect to most domestic and foreign vehicles.

Each line utilizes S.U.R.&R.-exclusive, universal Quick Connect technology which features push button, thumb release convenience. Supplementing the Quick Connects are Schrader Valve, Foreign Line (Female Banjo), Ford Spring Lock, GM (90 Degree Male), and Foreign Angled (Male) adapters.

In addition, the kit includes an S-Tool (S-Hook Sprayer) which features a nozzle end that produces a fine mist spray for thorough cleaning of the air intake. The S-Tool comes with two male quick chucks used for making connections to the canister. No special disconnect tools are required for use with the kit.

Said Joseph Wathey, S.U.R.&R. President, "The FIC440 is an affordable, easy-to-use kit which allows owners of existing fuel injection cleaning systems to breathe new life into their investment. When compared to purchasing adapter lines from original canister manufacturers, owners can save hundreds of dollars and take advantage of the opportunity to service more vehicles."

S.U.R.&R. also manufactures the FIC203, a complete fuel injection cleaning system which includes a canister and numerous line adapters. Both the FIC440 and FIC203 are manufactured in the United States.

Fuel injection cleaning systems are used to remove harmful carbon deposits, gums, and varnish located within intake valves, fuel injectors, combustion chambers, and throttle body systems. Benefits to users include improved engine performance and optimized fuel economy.
