LW800

## **Subject: S.U.R.&R. Expands Wrench Set Product Line - Introduces New LW750 Metric and LW800 Standard Ratcheting Flex Head Line Wrench Sets**

S.U.R.&R. announced the introduction of two new wrench sets including the LW750 Metric Ratcheting Flex Head Line Wrench Set and the LW800 Standard Ratcheting Flex Head Line Wrench Set (SAE).

Designed to make loosening and tightening applications simpler, the new wrenches feature a patented ratcheting system and can be used on numerous applications including brake, A/C, fuel, power steering, and suspension.

Using the unique open/close head design, installers are able to make a secure grip around the flank of the entire nut and avoid slipping problems common with other types of wrenches. As more pressure is applied to the wrench, the grip on the nut tightens. This feature is particularly helpful in difficult situations involving rounded, worn, and rusted nuts. The wrenches also feature a 90 degree flex head which makes working in tight spaces easier.

The LW750 includes six wrenches with sizes ranging from 8mm to 19mm. The LW800 includes four wrenches ranging from 5/16" to 3/4". Each double-sided wrench includes two sizes. Constructed using hardened, tempered chrome vanadium steel, the wrenches are designed for heavy-duty use and are backed by a lifetime warranty. A convenient carrying case is also included.

Individual wrenches are also available for purchase including the new, larger 16/17mm and 18/19mm metric sizes.

Said Joseph Wathey, S.U.R.&R. President, "The LW750 and L800 are complimentary to the previously released LW700 Metric Ratcheting Flex Head Line Wrench Set. Many professionals requested larger metric wrenches, specifically the 16/17 and 18/19mm sizes. In addition, there has been strong demand for the standard (SAE) sizes. With the introduction of these new kits and individual wrenches, professionals have access to a wide range of advanced wrenches which meet both their application and budgetary requirements".
