Subject: S.U.R.&R. Introduces New LW700 Metric Ratcheting Flex Head Line Wrench Set

Service professionals can tighten or loosen fittings quicker and easier using the new LW700 Metric Wrench Set now available from S.U.R.&R.

Featuring a patented ratcheting system, these technologically advanced wrenches can be used on numerous fittings including those used for brake, A/C, fuel, and power steering applications.

Using a unique open/close head design, installers are able to make a secure grip around the entire nut and avoid slipping problems common with other types of wrenches. As more pressure is applied to the wrench, the grip on the nut tightens. This feature is particularly helpful in difficult situations involving rounded, worn, and rusted nuts. The wrenches also feature a 90 degree flex head which makes working in tight spaces easier.

Included in the kit are four wrenches which cover sizes 8mm to 15mm. Each wrench features two metric sizes. These durable wrenches are made with hardened, tempered chrome vanadium steel and are backed by a lifetime warranty. A convenient carrying case is also included at no additional charge.

Said Joseph Wathey, S.U.R.&R. President, "The LW700 wrench set makes it easier for installers to tighten and loosen nuts because of the fast ratcheting action and tight gripping. This is particularly helpful when working in tight places or with worn nuts."
