Subject: S.U.R.&R. Introduces New TR500 Deluxe Transmission Line Repair Kit

Service professionals can stop waiting on parts and start repairing or replacing transmission lines in as little as five minutes with the new TR500 Deluxe Transmission Line Repair Kit available from S.U.R.&R.

Designed to make transmission line repairs fast and easy, the all-in-one kit can be used to repair or replace damaged transmission and cooler lines including those affected by leaking connectors, rust, cracks, and pinholes.

Included is a complete assortment of components required to perform line repairs including transmission line connectors, nuts, adapters, unions, tube cutter, clamp pliers, and specialized nylon tubing designed specifically for transmission line replacement applications. A total of 89 pieces and 30 feet of line are included with the kit.

The durable nylon transmission line is easy to route and safe for applications up to 300 PSI in temperatures up to 300 degrees Fahrenheit. When used with the included heat shield sleeve, the line is protected in temperatures up to 1200 degrees Fahrenheit.

An important design feature is that all connections are made by hand and do not require the use of a special tool. Coverage includes both 5/16" and 3/8" lines used within hundreds of domestic and foreign cars, trucks, & SUV's.

Said Joseph Wathey, S.U.R.&R. President, "The TR500 allows shops to avoid wasted bay time spent waiting on parts. Everything needed to repair a transmission line immediately is available at the fingertips of the installer. Having all connections made by hand is another big advantage for service professionals. This is important, especially when working in tight spaces."

In addition, the kit includes commonly used replacement items including connector clips and several difficult-to-find transmission line nuts.

For more information, contact S.U.R.&R. at 1.800.390.3996 or visit www.fuelsender.com/marketing.
